

Objective

I am an experienced Salesforce Developer looking for a new Role with the opportunity to work on diverse projects, love to build, connect, and develop solutions on the Salesforce Platform. Leaving an impact with knowledge sharing, inspiring the Trailblazer Community.

Experience

Salesforce Developer, Cloud Analogy, July 2019 to Present

- Experience in full life cycle in development of projects, requirements along with customer communication
- Fast learner and able to work independently as well as in a team environment with good written and verbal communication skills

Projects

Project 1: Salesforce to Dubb Integration

Requirements

This project requirement is when the Salesforce user creates/updates a Lead/Contact record in the Salesforce system and then syncs the created/updated record with Dubb. and also need to create a Dubb Setting component to handle the Dubb setting in Salesforce, and need a custom activity component to view the activity on contact/lead. after that need to make a lightning app and managed package.

Responsibilities

- Worked on Lightning Web Components.
- Worked on Apex Classes, Test Classes, and Integration.
- Create Lightning App and Manage Package.

Project 2: Lightning Web Component Development

Requirements

This project requirement is to create a new version of the client's App-Exchange Package in such a way that it will work for future created objects and their fields. The client needed to create new Lightning web components and replaced the existing VF Pages for their App-Exchange Package so that it will work for future created objects and fields. and also needed to Submit the new version for Salesforce security review and activated the new Package version on App Exchange.

Responsibilities

- Worked on Lightning Web Components.
- Worked on Apex Classes, Test Classes, and Integration.
- Created Manage Package and Deploy on App Exchange.

Project 3: **Lightning Web Component Development**

Requirements

This project requirement is to create a Lightning Web Component to View the Related attachment in Opportunity and Categories the attachment in Classified and Unclassified. and deployment is to be done through Change Set.

Responsibilities

- Worked on Lightning Web Components.
- Worked on Apex Classes and Test Classes.
- Created change set and Deploy.

Project 4: **Salesforce community development**

Requirements

This project requirement is to configure community sites for different markets from different origins in different languages. In this project, needed to configure the Salesforce Communities from scratch. First, we need to create some CMS workspace and then added content as well to support the community. Then we designed the entire community page using Experience Builder.

Responsibilities

- Created Community sites and Workspaces.
- Worked on HTML and CSS for Community Pages.
- Configure and Migrated the Community pages.

Project 5: **Vendor Management System (VMS)**

Requirements

This project requirement is to create lightning components to manage the invoices and time sheets records and when the user submits the invoice and time sheets then an email is sent to the owner for approval. and deployment is to be done through Change Set.

Responsibilities

- Worked on Lightning Components.
- Worked on Apex Classes, Triggers, and Test Classes.
- Worked on Deployment.

Project 6: Patient Health Survey

Requirements

This project requirement is to create a service form to collect health-related data from the patient and provide health-related services to the customer. In this project, we have created a custom setting for Question-related to health, set up the data model, and worked on the lightning components to display dynamically Question-related to health on the health service component and store the data received from the component in Salesforce. and deployment is to be done through Change Set.

Responsibilities

- Worked on Lightning Components.
- Worked on Apex Classes, Triggers, and Test Classes.
- Worked on Setup data model, Profile, Field Level Security, Sharing Settings, Permission Sets.
- Worked on Deployment.

Project 7: Customer touch program

Requirements

This project requirement is to send a follow-up email to the customer when the customer takes the home maintenance service at least one time. In this project, we have created the Lightning components, and email templates according to the requirement and implemented the functionality to send follow-up emails to customers till 180 days after taking the first maintenance service. and deployment is to be done through Change Set.

Responsibilities

- Worked on Lightning components.
- Worked on Setup data modal.
- Worked on Email Templates.
- Worked on Apex class, Batch Apex, Schedulable Apex, and Test Classes.
- Created an app and customize the app.
- Created change set and Deploy.

Project 8: VisualForce Pages Development

Requirements

This project requirement is to create a new version of the client's AppExchange Package in such a way that it will work for future created objects and their fields. In this project, we have created the settings page and made new functionality for existing VF Pages for their AppExchange Package so that it will work for future created objects and fields. Submitted the new version for salesforce security review and activated the new Package version on APP Exchange.
